

## Weather App Using React Js Project Description

A weather app provides users with real-time weather information, forecasts, and alerts for their location. Key features typically include:

1. **\*Current Conditions\***: Displays temperature, humidity, wind speed, and weather conditions (e.g., sunny, rainy).
2. **\*Forecasts\***: Offers hourly and daily forecasts, showing expected temperatures and weather changes.
3. **\*Maps and Radar\***: Visual weather maps and radar imagery to track storms and precipitation.
4. **\*Severe Weather Alerts\***: Notifications for severe weather warnings, such as storms or heat waves.
5. **\*Location Services\***: Automatically detects user location for localized weather updates or allows users to search for specific locations.
6. **\*Customizable Options\***: Users can often customize settings for notifications, units (Celsius/Fahrenheit), and display preferences.
